EDUCATION:

California State University, Los Angeles

Bachelor of Science, Computer Science

Graduate: May 2025

GPA: 3.6

WORK EXPERIENCE:

Software Engineer Intern | Santa Barbara Public Defenders Office

Aug. 2024 - May. 2025

Copilot Studio, Power Automate, Power Apps, Microsoft Teams, SharePoint

Remote, USA

- Developed a Teams-integrated chatbot using Copilot Studio that consolidated department services (PDGo, PDHelpDesk, time-off requests, and file access) into one intuitive interface, reducing tool-switching and improving user experience.
- Built Power Automate flows to dynamically retrieve contact information, locate SharePoint documents, and automate PDF form-filling through Adaptive Cards and user prompts.
- Led UX improvements by implementing logic branching, condition handling, and error validation within conversational flows, ensuring smooth, user-friendly interactions for all staff.

Software Engineer Intern | We2Link

June. 2024 - Aug. 2024

HTML, CSS, JavaScript, React.js, Firebase

Remote, USA

- Developed a full-stack application with React.js and Firebase to enhance memory management for users with cognitive impairments by helping them efficiently organize memories, passwords, contacts, and daily tasks.
- Engineered a detect-duplicate-contacts and merge feature by representing contacts as graph nodes, connecting them via shared contact details, and performing DFS to identify clusters of duplicates, enabling users to selectively merge and retain relevant contacts.

PROJECTS:

Inventory Management System

Aug 2024 - Dec 2024

Eclipse, PHP, HTML/CSS, MySQL

- Developed a web-based inventory tracking system with search, filtering, and cart management features to support day-to-day item handling for a simulated workplace.
- Built item browsing and filtering functionality by type, with dynamic cart updates (+/-) for user-selected items.
- Implemented secure login and role-based access control; administrators were redirected to an enhanced dashboard with item editing, deletion, and management privileges.
- Designed the backed using PHP and MySQL, ensuring data persistence and efficient query handling for item lookups and updates

Machine Learning: Human Emotion Detector

Aug 2024 - Dec 2024

Python, Jupyter Notebook, Pandas, Keras, Tensorflow, Scikit-Learn

- Trained various machine learning and deep learning models, including SVM, ANN, and CNN, to predict human emotions from grayscale images, achieving accurate emotion classification through image analysis.
- Preprocessed a dataset of 37,000+ human emotion images taken from Kaggle, utilized Pandas, Keras, and NumPy to optimize them as training data for machine learning models, achieving an average prediction accuracy of 60%.

Game Development: CodeBreakers - Virus Wars

Aug 2024 - Dec 2024

Unity, C#, Blender

- Designed and built a 3-player cooperative puzzle platformer game set inside a corrupted supercomputer, where players navigate digital environments like CPU cores and memory banks.
- Developed gameplay mechanics including shooting, platforming, and team-based puzzles using Unity and C#.
- Implemented split-screen camera layouts and level progression logic, emphasizing collaboration and exploration over combat.

TECHNICAL SKILLS:

Languages: Java, Python, JavaScript, C++, C#, PHP, HTML, CSS, SQL

Tools: AWS, JIRA, Github, Linux/Unix, Firebase, Unity (3D/2D)

Libraries/Frameworks: Bootstrap, React.js, Firebase, TensorFlow, Keras, Scikit-Learn, Pandas
